SUMMARY

Junior Software Developer delivering full-stack production web applications and REST APIs using TypeScript (React, Next.js, Vue/Nuxt), PHP/Laravel, and PostgreSQL. Led the creation of an inspection-checklist feature that records changes and auto-generates follow-up items, and modernized legacy Laravel services to return accurate error codes and improve data integrity. Builds LLM-powered side projects and writes tested, reviewed code with AI-assisted tools. Applies full-stack expertise to develop reliable, scalable solutions for the team.

EXPERIENCE

Lynked Inc. **Mar 2026 - Present**

Junior Software Developer

- Use TypeScript, React, Next.js, Nuxt 3, Vue 3, NestJS, PHP/Laravel, PostgreSQL, PHPUnit, Vitest, Playwright, Docker, and Sentry to build, test, containerize, and monitor full-stack applications
- Deliver full-stack features end to end across a multi-service platform (Next.js, Nuxt 3, Vue, NestJS, Laravel, PostgreSQL), such as an inspection checklist that records who made each change and auto-creates follow-up items, and bulk-edit tools.
- Maintain two legacy PHP/Laravel applications, fixing REST endpoints that reported success on failure so they return accurate 4xx/5xx errors and roll back database transactions.
- Harden data integrity and security with duplicate-record checks, Zod schemas and strict input-format rules, and fix SQL injection (prepared statements), API-key auth that accepted revoked keys, and log/HTML-email injection.
- Debug and fix React, Next.js and Vue defects: pages crashing to a white screen (error boundaries, null-safe lookups), deep links that opened the wrong item, stale form state, and mobile layout on iOS and Android.
- Write automated tests for new and legacy code: the first PHPUnit unit tests for an untested legacy module (run in Docker), Vitest unit and component tests, Playwright end-to-end tests, and mutation testing to expose weak tests.
- Collaborate in an Agile team through Jira and Bitbucket pull requests, address senior code review feedback, and document technical debt to support code quality and future planning
- Apply AI-assisted development (Claude Code, Atlassian Rovo) in a spec-first, test-driven workflow, verifying AI output by running it; built personal Claude Code review agents and hooks, plus a scheduled job that turns PR comments into fix briefs.

Continuum Commerce Solutions **Nov 2024 - Sep 2025**

Software Developer Intern

- Supported application development, deployment, code quality, and reporting with .NET, C#, SQL Server, Python, Docker, AWS, Terraform, Ansible, GitLab CI/CD, SonarQube, and Power BI.
- Designed and deployed a full-stack .NET and SQL Server platform for managing client configuration.
- Built API fuzz-testing pipelines that surfaced edge-case failures and security defects before release.
- Refactored legacy code and made SonarQube a blocking code quality gate in GitLab CI/CD.

Rocket Financial **Oct 2022 - Sep 2024**

Software Developer Intern

- Built responsive, accessible front-end interfaces in React and TypeScript, improving usability for users with different access needs
- Developed microservices and containerized them with Docker and Kubernetes to streamline deployments.
- Expanded automated test suites with NUnit, Jest, and pytest across services and UI components, improving test coverage and helping catch regressions earlier

TECHNICAL SKILLS

- **Languages**: TypeScript, JavaScript, PHP, Python, C#, Java, SQL, Bash, HTML, CSS
- **Frontend**: React, Next.js, Vue 3, Nuxt 3, Tailwind CSS, Mantine, Vite, responsive and accessible UI
- **Backend**: Node.js, NestJS, Express, Laravel, .NET, ASP.NET Core, Blazor, FastAPI, REST APIs, RabbitMQ-, Microservices, Software Architecture
- **Data**: PostgreSQL, SQL Server, MongoDB, Prisma, Supabase, SQLAlchemy, Pandas, NumPy, Power BI
- **AI & Tooling**: Claude Code (custom agents, skills, hooks), Model Context Protocol, agentic workflows, prompt engineering, LLM APIs (OpenAI-compatible, Ollama), Hugging Face Transformers, PyTorch
- **Testing**: PHPUnit, Vitest, Jest, Playwright, PyTest, NUnit, Testing Library, mutation testing, SonarQube
- **Tools**: Git, Bitbucket, GitLab CI/CD, Docker, Docker Compose, Linux, Sentry, Jira, Agile/Scrum, AWS

PROJECTS

LevelUp **2026**
- (Next.js, TypeScript, Supabase, LLM API)
- Generated personalized career roadmaps from uploaded resumes using an LLM API, with Zod-validated outputs, Supabase Row Level Security, and end-to-end tests.

GitHub Dashboard **2026**
- (React, TypeScript, Express, Prisma)
- Built an Express and Prisma backend that unifies pull requests, issues, and CI status across repositories, with GitHub OAuth, caching, and rate-limit monitoring.

Market Sentiment Analyzer **2026**
- (Python, Hugging Face Transformers, PyTorch)
- Scores financial news sentiment with FinBERT across three market/news APIs and summarizes sector trends with an LLM.

Toronto Event Finder **2025**
- (FastAPI, React, Docker)
- Geocodes an address via OpenStreetMap and filters Toronto open-data events by distance, category, cost and date.

MultiSportTracker **2025**
- (C#, .NET, Blazor Server)
- Browses teams, players and events from TheSportsDB API in a Blazor Server app, with in-memory response caching.

EDUCATION

Wilfrid Laurier University & Munster Technological University **2020 - 2025**
Bachelor of Science (BSc), Computer Science
