Software developer with production experience across Node/TypeScript, .NET and Python microservices.

EXPERIENCE

Junior Software Developer, Lynked Inc. Mar 2026 – Present

- Eliminated duplicate-record creation across three backend services with multi-field validation, and fixed update paths that persisted empty strings instead of NULL.
- Corrected REST endpoints that returned HTTP 200 for missing resources, adding 404/400 responses with regression tests.
- Improved search relevance by replacing exact-match lookup with fuzzy matching for partial and misspelled queries.
- Built cross-service features: bulk record updates, multi-criteria search with automatic status transitions, and new fields made editable across three front ends.
- Diagnosed and fixed production defects: a page-crashing render bug, text truncated in stored notes, stale form state persisting after a dependent selection changed, and broken pagination on iOS and Android.
- Maintain two legacy PHP/Laravel applications with minimal, defensive changes.

Technologies: NestJS, Next.js, Nuxt 3, Node.js, PHP/Laravel, Go, PostgreSQL, Redis, Docker Compose, Caddy, Jira

Software Developer Intern, Continuum Commerce Solutions Nov 2024 – Sept 2025

- Designed and deployed a full-stack .NET and SQL Server platform for managing client configuration.
- Built automated API fuzz-testing pipelines that surfaced edge-case failures and security defects before release.
- Integrated SonarQube into GitLab CI/CD, turning code-quality regressions into a blocking gate.

Technologies: .NET, C#, SQL Server, Python, Docker, AWS, Terraform, Ansible, GitLab CI/CD, SonarQube, Power BI

Software Developer Intern, Rocket Financial Oct 2022 – Sept 2024

- Built responsive, accessible React and TypeScript interfaces, and containerized microservices with Docker and Kubernetes.
- Expanded automated test coverage with NUnit, Jest and PyTest across services and UI components.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript, Python, C#, Java, PHP, SQL, Bash
Backend:	.NET, ASP.NET Core, Blazor, SignalR, NestJS, Node.js, FastAPI, Laravel, REST APIs, microservices
Frontend:	React, Next.js, Nuxt 3, Vite, Tailwind CSS, responsive and accessible UI
Data:	PostgreSQL, SQL Server, MongoDB, Redis, Prisma, Supabase, database migrations, ETL pipelines, Pandas, NumPy, Scikit-learn, XGBoost, PyTorch, Transformers, LLM APIs, Power BI
Testing:	Vitest, Jest, PyTest, NUnit, Playwright, unit and integration testing, SonarQube, code review
Tools:	Git, Docker, Docker Compose, Bitbucket Pipelines, GitLab CI/CD, Jira, Agile/Scrum

PROJECTS

LevelUp, Next.js, TypeScript, Supabase 2026

- Turns an uploaded resume into an LLM-generated career roadmap; per-user data isolated with PostgreSQL Row Level Security, model keys kept server-side.

Market Sentiment Analyzer, Python, PyTorch, Transformers 2026

- Ingests market data and news from three APIs, scores sentiment with transformer models, and aggregates results into sector-level trend dashboards.

GitHub Dashboard, React, TypeScript, Express, Prisma 2026

- Consolidates open pull requests, issues and CI status into one triage view; GitHub OAuth with httpOnly sessions and a rate-limit-aware cache.

MultiSportTracker, C#, Blazor Server, SignalR 2025

- Tracks teams, players and fixtures across sports, with a SignalR hub pushing live score updates to connected clients.

Toronto Event Finder, FastAPI, React, Docker 2025

- Geocodes an address via OpenStreetMap Nominatim and filters live open-data events by distance, category, cost and date.

EDUCATION

BSc Computer Science, Wilfrid Laurier University & Munster Technological University 2020 – 2025
